

Tower Coming Summer 2017

IMPORTANT TOWER INFORMATION

The main purpose of the temporary tower will be to provide a safe aviation environment at KTRK. We expect the tower to also shorten transit times over the region and reduce neighborhood overflights and annoyance. The tower does not allow for larger aircraft to use KTRK. Following is important information for the tower:

- The tower will operate seven days a week from 7 am - 9 pm starting 6/01/17.
- The tower operator, Mid West ATC, will employ six FAA ATC certified staff.
- Tower services and Class E influence will extend from the surface to 2,500' AGL within a 4.2 mile radius of the airport. If the program is continued, KTRK will have Class D designated airspace in summer 2018.
- Important radio frequencies in effect:
 - 118.0 Mhz - AWOS "Automated Weather Observation System"
 - 120.575 Mhz - TOWER/CTAF "Common Traffic Advisory Frequency"
 - 118.3 Mhz - Ground Control
 - 122.8 Mhz - UNICOM/FBO "Universal Communications/Fixed Based Operator" (used for FBO communications i.e., ramp parking, aircraft services)
